OPIS IZDELKA

Puluz tempered glass set for DJI Osmo Action 6 (3 pcs)

The Puluz tempered glass set is designed to fully protect the front and rear screen and lens of the DJI Osmo Action 6 camera, giving each sensitive part of the device an effective protective layer without affecting the appearance or functionality. The high quality of workmanship ensures that the accessory retains its properties for a long time, effectively protecting the equipment even with intensive use.

High hardness and resistance to breakage

The tempered glass used is distinguished by its high hardness of 9H, which effectively protects the surface from scratches and damage. What's more, in the case of a strong impact, the material breaks into small, blurry fragments, which increases the safety of use.

Full transparency and faithful image reproduction

The glasses feature high light transmission and low reflection, so the screen retains its original brightness and sharpness. The image remains clear, detailed and undistorted, which is extremely important when recording and previewing footage.

Protection against dirt and damage

A special protective coating protects the surface from fingerprints, water, grease, dust and scratches. This means that if necessary, you can easily clean the glass, restoring it to perfect clarity.

Easy installation and comfortable use

The high-adhesion adhesive layer allows quick and hassle-free installation of the glass. All you need to do is carefully clean the surface of the display or lens - no need for additional accessories or adhesives. What's more, the smooth edges make using the touchscreen comfortable and enjoyable.

Included

- Tempered glass for the front screen
- Tempered glass for the rear screen
- Tempered glass for the lens
- Cleaning cloth
- Wet and dry cleaning wipe
- Dust removal sticker
- Stickers for easy installation
